

Flowchart Explanation: Interaction Between HTML and JavaScript

This document provides a detailed explanation of the flowchart that visually represents the interaction between HTML elements and JavaScript logic for the country selection and validation on your form.

Flow Explanation:

1. Page Load: The page loads, and the JavaScript code is executed.
2. Fetching Country Data: The JavaScript fetches a list of countries from an external API.
3. Populate Select Options: The fetched country data populates the select dropdown with available countries.
4. User Interaction:
 - a. The user selects a country from the dropdown.
 - b. If "Other" is selected, a text input appears for the user to specify the country.
 - c. If another country is selected, the "Other" input field is hidden.
5. Form Submission:
 - a. The user submits the form.
 - b. The JavaScript checks if a country is selected.
 - c. If "Other" is selected and the text input is empty, an error message is displayed.
 - d. If no country is selected, an error message is displayed.
 - e. If a valid country is selected or specified, the form is submitted.
